

## Structure for apps:

**app\_name/** - The app directory contains the following files and folders:

- **\_\_init\_\_.py** - An empty file that marks the directory as a Python package.
- **migrations/** - A folder that contains database migration files generated by Django's ORM.
- **models.py** - A file that defines the database models for the app.
- **admin.py** - A file that defines the app's admin interface.
- **apps.py** - A file that contains the app's configuration.
- **tests.py** - A file that contains the app's unit tests.
- **views.py** - A file that contains the app's view functions for processing HTTP requests.
- **urls.py** - A file that defines the app's URL routing.
- **static/** - A folder that can be used to store static files like CSS, JavaScript, and images.
- **templates/** - A folder that contains HTML templates used to render the app's views.

You usually have to add your own files / folders such as: `urls.py`, `utils.py`, `mixins.py`, `templates`, `static` etc.
